1. Which command can be used to verify if a backup stgpool command finished successfully?

- A. Q LOG
- B. Q ACTLOG
- C. Q PROCESS
- D. Q STGPOOL

Answer: B

2. What is the minimum size of active log?

- A. 2 GB
- B. 13 GB
- C. 128 GB
- D. It depends upon the file system size

Answer: A

3. Which option disables deduplication when using update scgpooi?

- A. DUPLICATE=NO
- B. DUPLICATE=OFF
- C. DEDUPLICATE=NO
- D. DEDUPLICATE=OFF

Answer: C

4. An IBM Tivoll Storage Manager (Tivoli Storage Manager) administrator checks daily the Tivoli Storage Manager activity log for errors and warnings This task is a manual process that should be automatedD. What should the administrator do?

- A. Create a script and run it daily from the command line.
- B. Create a script and a client schedule to run it daily automatically.
- C. Create a script and an administrative schedule to run it daily automatically.
- D. Use the Administration Center, select Define Script, and then select "run daily".

Answer: C

5. Which type of storage pool can use either a sequential access device class or a random

- A. active-data pool
- B. copy storage pool
- C. primary storage pool
- D. deduplicated data pool

Answer: C

6. After a scheduled backup to IBM Tivoll Storage Manager (Tivoli Storage Manager) performed by Tivoll Storage Manager client node, it has been found that few files have been skipped or not included in backup for some reason. Which two logs from backup-archive client should be checked as an initial step to get information of schedule operation failure? (Choose two.)

- A. activity log
- B. error report from operating system
- C. dsmdir.log file located in backup-archive client installation directory
- D. Dally Operational Report generated by Tivoli Storage Manager server
- E. dsmscheD. log file located in backup-archive client Installation directory

Answer: C, E

7. What occurs when the archive log runs out of space?

- A. An archive log mirror is created.
- B. A failover archive log is created.
- C. The IBM Tivoli Storage Manager server halts.
- D. Data begins being deleted from the IBM Tivoli Storage Manager server

Answer: C

8. An IBM Tivoli Storage Manager administrator receives a call from a client complaining that backups are taking twice as long as usual. The administrator decides to run a manual backup to check the client's performance and the backup completes. Where should the administrator look to review the statistics of the backup that was completed?

- A. on the server in the event.log
- B. on the server in the activity log
- C. on the client in the dsmdir.log
- D. on the client in the dsmdir.log

9. Which two statements are true about shredding sensitive data? (Choose two.)

- A. I/O response time is improved.
- B. Performance for shredding data is faster.
- C. Discovering and reconstructing data is easy.
- D. Data is overwritten one or more times after it is deleted.
- E. Shredding can be done either automatically or manually

Answer: D,E

10. Which command can be used to display information about all volumes checked into an automated library for use by the IBM Tivoli Storage Manager server?

- A. Q MEDIA
- B. Q LIBVOL
- C. Q VOLUMES
- D. Q CONTENTS

Answer: B
